The PRODUCTION TWINS

SUPERIOR FERTILIZERS for HOME GARDENS

Corenco HOME GARDEN

BALANCED. Home Garden Fertilizer contains the three basic plant food elements and many minor elements.

SAFE. Home Garden Fertilizer, applied as recommended, gives minimum danger of "burning."

RECOMMENDED. Tests and long experience show that the 5-10-5 formulation of Home Garden Fertilizer is the best for vegetables in the home garden.

A SPECIALTY. Especially formulated to give the home garden a complete diet, Corenco Home Garden is conveniently packaged in 5-, 10-, 25-, 50-, and 100-lb. bags.

Merrimack TURF GREEN

BALANCED. Turf Green contains the three basic plant food elements needed to maintain a healthy turf. Most important, 40% of the nitrogen content is natural organic, slowly available as turf plants need it.

SAFE. Applied in recommended amounts, there is little danger of "burning" if Turf Green is applied when the grass is dry.

RECOMMENDED. Tests show that an 8-6-4 fertilizer, with 40% of organic nitrogen is best for turf.

A SPECIALTY. Use Turf Green only on turf and trees.

Merrimack Seed Catalogue 1958

**Amazing results to be had with
Merrimack Fertilizers - - - Sprays and Dusts**

As we embark upon the new year of 1958 we are reminded of ordering our vegetable and flower seeds for our spring garden.

With the increased interest in suburban and country living it is natural for the interest in gardening to keep pace with the trend. Each year increasing numbers of suburbanites are discovering the satisfaction and pleasure of growing vegetables and flowers. They are finding work in the garden to be healthful as well as profitable. Many have realized from \$100 to \$300 savings in the family food budget.

The **Merrimack Farmers' Exchange, Inc.**, has been supplying high quality seeds to home gardeners and commercial farmers alike for more than a quarter of a century.

Merrimack Seeds are tops in inherent quality. They are treated with a fungicide to help combat soil borne diseases. **Merrimack Seeds** are tested by the official seed testing laboratory to assure you of high germination. All possible safeguards are installed along the line to insure highest quality.

It is always good insurance to place your seed order early. **Today** is not

too early. You may order from your nearest Merrimack Store or mail your order to Merrimack Farmers' Exchange, Inc., Seed Department, Concord, New Hampshire. An order blank is included for your convenience. There is no charge for postage on **Merrimack Vegetable Seeds and Merrimack Flower Seeds**.

In addition to high quality seeds, you will find a complete selection of gardening aids at your **Merrimack Store**. Many of these items are described in this catalogue.

Merrimack Fertilizers are formulated to meet your every need whether it be for vegetables and flowers, or for the lawn.

You will find a spray or dust to combat all pests. Tools and equipment to help make your work easier are on hand . . . all with a brand name you have learned to associate with the best in quality.

Experienced Merrimack personnel will assist you with your gardening problems. Ask them about the **MERRIMACK "EASY-PAY" PLAN**. It can be of tremendous help to you in purchasing needed equipment.

*Merrimack Seeds, Fertilizers and Pest Control materials really
"paid off" for Conrad Damon in 1957.*

MERRIMACK SEEDS *for* 1958

Beans

One pound of seed plants about 200 feet of row. Bean plants are very sensitive to frost. In most years they should be planted between May 15 and July 15. Plant in rows 18 to 24 inches apart for hand cultivating and thin to 8 to 10 inches in the row. Prepare a good seed bed and fertilize well. An average yield from 100 feet of row is 75 to 100 pounds of string beans. To control damping off in wet soils, treat bean seeds with Spergon.

Except as otherwise noted, prices are per pound.

BUSH — GREEN PODDED

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{4}$ lb.	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
Bountiful Green Pod. Pods flat, green, prolific, stringless. (50 days)	.20	.57	.51	.43	.39	.34
Burpee's Stringless Green Pod. Pods round, green, meaty. (52 days)	.20	.58	.51	.44	.40	.35
Contender. Round pod, stringless, thick flesh, medium green, very heavy yielding, early. (50 days)	.20	.56	.50	.42	.36	.30
Tenderlong. A new improved bean with round, dark green and stringless pods. (54 days)	.20	.57	.52	.46	.40	.38
Wade. A new round pod green bean, resistant to mosaic and mildew, attractive pods, good yielder. (54 days)	.20	.57	.50	.45	.38	.35

BUSH — WAX PODDED

Black Wax Pencil Pod. Pods round, tender, slightly curved, golden yellow. (52 days)	.20	.60	.53	.46	.42	.36
Brittle Wax. Pod medium round, slightly curved, brittle, fleshy, stringless. (58 days)	.20	.59	.53	.48	.43	.37
Kinghorn Wax. A new round yellow bean of excellent quality. 5 inches to 6 inches long, round, meaty, fiberless, with fine flavor. Superior to the old favorite pencil pod. Is an ideal home and market garden bean. Excellent for canning, freezing or home use if you want a white seeded tasty round wax bean. (56 days)	.20	.65	.58	.55	.45	.43

BUSH — SHELL

Dwarf Horticultural Long Pod. Oval pod, chamois brightly splashed with carmine at shell stage. Excellent quality horticultural bean. (55 days)	.20	.65	.58	.55	.45	.43
---	-----	-----	-----	-----	-----	-----

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{4}$ lb.	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
Goddard Bush Shell. Large pods and beans splashed with red. (70 days)	.20	.57	.52	.49	.41	.39
BUSH — LIMA						
Foodhook Bush Lima 242. Plants large, upright. Pods straight, long, contain 3 to 4 large, thick-oval beans. (75 days)	.20	.59	.54	.51	.41	.36
BUSH — FIELD						
Red Kidney. Bush or dwarf, the popular kidney bean for baking. (95 days)	.20	.61	.54	.49	.43	.38
Soldier. A bush or dwarf bean, strictly a New England product recommended only as a high quality bean for baking. (75 days)	.20	.59	.52	.47	.41	.36
Trout. An early, high yielding dry bean of excellent quality. Especially adapted to central and northern New Hampshire. It is prettiest of all dry beans.	.20	.59	.52	.47	.41	.36
White Pea. White Navy, disease-resistant strain, heavily productive. (90 days)	.20	.49	.42	.39	.32	.30
Yellow Eye (State of Maine). For baking. Most popular New England variety of field beans. (85 days)	.20	.59	.52	.47	.41	.36
POLE						
Kentucky Wonder Green Pole. Green pods, almost round. (65 days)	.20	.59	.52	.46	.42	.36

Beets

One half ounce of seed will plant 100 feet of row. Beets are hardy and do well most seasons when planted between April 25 and July 15. Beets germinate poorly in sour soil or newly plowed soil. Plant in rows 12 to 18 inches and thin plants 2 to 4 inches in row.

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{2}$ oz.	1 oz.	$\frac{1}{4}$ lb.	1 lb.
Crosby Egyptian. Extra early, small tap root, globe shaped, dark red. (60 days)	.15	.25	.55	1.70
Detroit Dark Red. Roots globe shaped, smooth, color deep, blood red, good keeper. (68 days)	.15	.25	.65	1.85
Early Wonder. For bunching and pickling. Semi-globular, deep red, smooth, small neck. (60 days)	.15	.25	.55	1.70
Winter Keeper. Very high quality beet for home garden use. Especially good for winter use. (70 days)	.15	.25	.65	1.70
Mangels, Long Red. Light red roots, flesh white with rose tinge, growing half above the ground. (110 days)	.15	.25	.55	1.70

4-H DEMONSTRATION GARDENS

Each year Merrimack Farmers' Exchange, Inc., cooperates with the 4-H Clubs in each of the ten counties of New Hampshire by supplying seeds and pest control materials to ten 4-H Club members in each county for a demonstration garden. We are very proud to show you what an outstanding job a few of these 4-H Club members did in 1957.

David Tibbetts (left) of the Loudon 4-H Club shows his 4-H demonstration garden to Wayne Rich, Merrimack County 4-H Club Agent.

John Cardinal (left) of 4-H Club in Farmington, N. H., is glad to have Dr. John Kitchin (center) Extension Vegetable Specialist, UNH, and Warren Hall, Strafford County 4-H Club Agent, check the beans in his 4-H demonstration garden.

Broccoli

One packet of seed will plant 200 feet of row. Sow seed between May 1 and July 1. Transplant to rows 24 inches apart with 18 inches between the plants. One hundred feet of row will produce 50 to 60 heads.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Green Calabrese. The best variety for this section. Heads formed of bright green compact buds, free from leaflets. (65 days)	.15	.25	.40	1.40	4.45

Brussels Sprouts

One packet of seed will produce about 250 plants. Sow early in especially prepared seed bed or coldframe. Transplant to rows 3 to 4 feet apart with plants 18 inches apart.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Long Island Improved. Compact stem tightly packed with small heads 1½ in. to 1¾ in. in diameter. (97 days)	.15	1.25	2.15	5.50	

Cabbage

One packet of seed will plant 200 feet or row. Plant seed between May 11 and June 20. Transplant to rows 2 to 2½ feet apart with 1½ to 2½ feet between the plants. One hundred feet of row will produce from 150 to 300 pounds of cabbage.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Golden Acre Extra Early. Small, round, solid heads. (65 days)	.15	.25	.50	1.75	6.25
Early Round Dutch. Best second early cabbage for home garden and commercial use. (82 days)	.15	.25	.50	1.75	6.25
Danish Ballhead. Best type of late cabbage, good shipper, heads very hard, smooth. (105 days)	.15	.25	.50	1.75	6.25
Red Acre. Heads similar to Golden Acre except red. (78 days)	.15	.65	1.00	3.00	9.00
Long Island Savoy. Late savoy type, heads fine texture, small core. (100 days)	.15	.65	1.00	3.00	9.00

Chinese Cabbage

Sow seed about 3 months before first frost expected. Packet will sow about 50 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Michihili. Exceptionally sure heading, excellent quality. (75 days)	.15	.35	.65	1.75	

Carrots

One half ounce of seed will plant about 200 feet of row. Plant seed between April 25 and July 15 in rows of 12 to 18 inches apart. Thin to 1 to 2 inches between plants. The average yield on 100 feet of row is 3 to 4 bushels.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Chantenay Red Cored. Roots deep orange, tapered, stump-rooted, 6 inches in length. (72 days)	.15	.25	.90	2.75
Danvers Half Long. Flesh bright orange, tender, roots about 8 inches long, stump-rooted. (75 days)	.15	.25	.90	2.75
Hutchinson. Roots deep orange. Very heavy yielder. (80 days)	.15	.25	.90	2.75
Imperator. Semi-blunt, flesh rich orange color, tender, and of excellent quality. Ideal for market garden. (77 days)	.15	.25	.90	2.75
Long Orange. Red orange, roots tapered to a point, large 10 to 12 inches. (88 days)	.15	.25	.90	2.75
Nantes Golden Beauty. Early, coreless, reddish orange, tender. (70 days)	.15	.25	.90	2.75

Cauliflower

One packet of seed will plant about 150 feet of row. Plant seed between May 1 and June 20 in the field or in beds between March 15 and April 15. Transplant plants to rows 2½ feet apart with 1½ feet between the plants. Cauliflower is harder to raise than cabbage. It refuses to head in hot weather.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.
Early Snowball. Plants dwarf, early, heads solid, pure white. (55 days)	.20	1.25	2.25

Celery

One packet of seed will produce about 500 plants. Plant early. May be started in coldframe.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Summer Pascal. Stalks are heavy compact with a full heart, excellent quality. (115 days)	.15	.75	1.35	4.50

Llewellyn Millette of the Gonic 4-H Club is proud to show Dr. John Kitchen, Extension Vegetable Specialist of the University of New Hampshire, how he controlled the corn borer with DDT in his 4-H demonstration garden.

Corn

One pound of seed plants about 400 feet of row. Most seasons sweet corn should be planted between May 10 and July 1. Plant in rows 2 to 3 feet apart. Thin the plants to 8 to 12 inches in the row. The average yield from 100 feet of row is 12 to 15 dozen ears. In order to get the best ears, plant corn in a block at least 3 to 4 rows. Prepare a good seed bed and fertilize well. This seed has been treated with Spergon to control soil-borne diseases.

Except as otherwise noted, prices are per pound.

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{4}$ lb.	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
OPEN POLLINATED						
Golden Hummer. Extra early and sweet. (67 days)	.20	.56	.49	.44	.40	.37
Early Yellow Sensation. Large yellow, 10 to 12 rows. (70 days)	.20	.56	.49	.44	.40	.37
Golden Sunshine. Golden yellow, 8 to 12 rows. (76 days)	.20	.56	.49	.44	.40	.37
Golden Bantam. Original type, 8 rows, small stalks and ears, sweet. (80 days)	.20	.56	.49	.44	.40	.37

VARIETY, DESCRIPTION AND PRICE

HYBRID

High Quality Seneca "60." Extra high quality has been added to the old Seneca "60." Ears 6 to 7 inches, 8 to 10 rows. (62 days)

$\frac{1}{4}$ lb.	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
.20	.75	.70	.67	.57	.53

Golden Beauty. A new yellow hybrid sweet corn developed by Prof. W. H. Lachman, Univ. of Mass. The unhusked ears are medium sized and attractive, $7\frac{1}{2}$ in. long by $1\frac{2}{3}$ in. in diameter. Plants resistant to Helminthosporium and somewhat resistant to Bacterial Wilt. All American award winner for 1954. (73 days)

.20	.71	.66	.63	.53	.49
-----	-----	-----	-----	-----	-----

Earligold. An excellent medium early, yellow corn. Large, attractive ear for market, good quality. (75 days)

.20	.71	.66	.63	.53	.49
-----	-----	-----	-----	-----	-----

Marcross C-6.13. Medium early, yellow, 8 to 12 row. (75 days)

.20	.71	.66	.63	.53	.49
-----	-----	-----	-----	-----	-----

Carmelcross. Medium early, yellow. Excellent for home or market gardening. 12 to 16 row. (80 days)

.20	.71	.66	.63	.53	.49
-----	-----	-----	-----	-----	-----

Golden Cross Bantam. Yellow hybrid, the one best. 10 to 14 row. (88 days)

.20	.71	.66	.63	.53	.49
-----	-----	-----	-----	-----	-----

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{4}$ lb.	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
Victory Golden. Yellow hybrid, heavy yielding, excellent quality, attractive ear for market. Matures approximately 2 days after Golden Cross Bantam. (90 days)	.20	.77	.72	.69	.59	.55
Home Garden Special. Seasonal supply of four varieties in separate packages for the home garden. Selections made to give continuous supply of high quality corn for family use. (62 to 88 days)		$\frac{1}{2}$ lb.	.53			

Cress

Plant early as soon as soil is ready. One packet of seed will plant about 50 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	$\frac{1}{2}$ oz.	1 oz.	$\frac{1}{4}$ lb.
Curled (Pepper Grass). Hardy vigorous growing annual excellent for garnishing. (50 days)	.15	.30	.55	1.65
Water. Hardy perennial excellent for garnishing. (180 days)	.15	.55	.95	3.00

Cucumbers

One half ounce of seed plants 200 feet of row. Plants sensitive to frost. Plant seed May 25 to June 15 in rows 3 to 4 feet apart with 3 to 5 feet between the hills. One hundred feet of row should yield 75 to 100 pounds.

VARIETY, DESCRIPTION AND PRICE	$\frac{1}{2}$ oz.	1 oz.	$\frac{1}{4}$ lb.	1 lb.
Arlington White Spine. Medium green, 8 to 9 inches. (60 days)	.10	.20	.75	2.35
Long Green. Dark, shiny green, slightly tapered, 10 to 11 inches. (65 days)	.10	.20	.75	2.25
Marketer. Vigorous and prolific, dark green. (65 days)	.15	.25	.95	2.85
National Pickling. The pickles are dark green cylindrical with blocky ends. One of the best picklers. (55 days)	.15	.25	.95	2.85
Straight 8. Fruits about 8 inches in length, about $1\frac{1}{2}$ inches in diameter. Well rounded ends. Color deep green. Good shipper. Splendid slicing variety. (75 days)	.15	.25	.95	2.85

Dandelion

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Improved Thick Leaf. The improved cultivated dandelion produces excellent greens. Sow the seed in spring or summer and greens are ready for use the following spring.	.15	1.00	1.65	3.75

Dill

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Large plants. For flavoring.	.15	.25	.50	1.50

Egg Plant

Start plants indoors about 8 weeks before transplanting. Transplant after soil is warm and danger of frost is past. A packet of seed will produce about 200 plants.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
New Hampshire Hybrid. Earliest strain developed by Prof. J. R. Hepler, very productive, excellent quality. (73 days)	.15	.55	1.00	2.80

Endive

One half ounce of seed will plant 150 feet of row. Plant between May 20 and June 15 in rows about 18 inches apart with 6 to 8 inches between plants. One hundred feet of row will usually produce 50 to 75 pounds of greens. May be transplanted to a cool cellar in November for fall and early winter use.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Deep Heart. Deep, full, compact, well-balanced, light yellow heart. (88 days)	.10	.20	.80	2.45
Green Curled. Broad white mid-rib, good fall variety. (95 days)	.10	.20	.80	2.45

Herbs

For flavoring and seasoning meats, vegetables and dressings. The flavor of home grown herbs is much better than the commercial product.

**Borage, Chives, Coriander, Florence Fennel,
Sage, Summer Savory, Sweet Basil, Sweet
Marjoram, Thyme**

Each Packet 15 cents

Kale

Plant in rows about 2 feet apart with 18 inches between plants. Sow from early spring to 3 months before frost. One packet of seed will plant about 100 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Blue Scotch. Very hardy. Compact, thick leaf set, good flavor and quality. (60 days)	.15	.25	.50	1.35

Kohl Rabi

Plant in rows 18 to 24 inches apart with 4 to 6 inches between plants. Plant early or after mid-summer for fall use. One packet of seed will plant about 50 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
White Vienna. Bulbs are pale green almost white. Excellent quality. (60 days)	.15	.45	.70	1.65

Leek

Plant early in rows 18 to 24 inches apart with 4 to 6 inches between plants. One packet of seed will sow about 25 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
American Flag. Popular strain with long thick stem and large drooping leaves. (150 days)	.15	.45	.80	2.00

Lettuce

One packet of seed will sow 40 feet of row. May be planted between April 25 and August 1. Plant in rows 12 to 18 inches apart with 10 to 15 inches between plants. For head lettuce, soil should not be acid and plants must have plenty of available plant food. Give plants ample room.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Boston Curled. Loose-leafed variety, early light green leaves. (43 days)	.10	.20	.35	1.10	3.25

Warranty: We have carefully selected varieties and strains to offer seeds of high vitality which will produce favorably under normal conditions. Since we cannot control these conditions, the Merrimack Farmers' Exchange, Inc., gives no warranty, expressed or implied, as to the productiveness of any seeds it sells and will not be in any way responsible for the crop. Our liability, in any instance, is limited to the purchase price of the seed. E. & O. E.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Early Prize Head. Loose-heading variety, crisp and tender, light brown edge on leaves. (47 days)	.15	.20	.35	1.10	3.25
Great Lakes. Semi-iceberg type. Large heads. Especially adapted to late summer use. (78 days)	.10	.30	.55	1.85	5.75
Imperial 44. Iceberg type which does extremely well in hot weather. (82 days)	.10	.25	.45	1.50	4.50
Oak Leaf. An early lettuce of high quality, excellent for home garden or commercial use. (40 days)	.10	.20	.35	1.50	4.50
A-36. A new, high quality heading lettuce. Excellent for shipping. (86 days)	.10	.30	.55	2.10	6.25

Muskmelons

One half ounce of seed plants 200 feet of row. Plants sensitive to frost. Plant seed between May 25 and June 10 in rows 3 to 4 feet apart with 3 to 6 feet between plants. One hundred feet of row should yield 50 to 75 pounds.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Bender's Surprise. Fruits oblong, flesh bright salmon. (95 days)	.10	.20	.30	.85	2.50
Delicious. Extra early, flesh deep orange-yellow, sweet. (85 days)	.10	.20	.30	.85	2.50
Granite State. The new melon developed at the Univ. of N. H., excellent quality, resistant to disease. (83 days)	.10	.20	.30	.85	2.50

Okra

Plant when soil is warm in rows 2 to 3 feet apart with 16 to 18 inches between plants. One packet of seed will sow 50 feet of row.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Dwarf Green Long Pod. Pods dark green, spineless, tender, excellent quality. Especially adapted to northern areas. (50 days)	.15	.25	.50	1.25

Onion

One half ounce of seed will plant 100 feet of row. Plant between April 25 and June 15 in rows 12 to 18 inches apart with 2 to 3 inches between the plants. The average yield on 100 feet of row is 1 to 3 bushels.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.	1 lb.
Southport White Globe. The best white variety, bulbs medium size, round, pure white. (110 days)	.15	.20	.35	1.25	4.50
Danvers Yellow Globe. Bulbs medium large, round, yellow and firm. (110 days)	.15	.20	.35	1.25	4.50

Onion Sets

White Onion Sets. Early globe. Minimum mail order 2 lbs. for .55

Yellow Jap Onion Sets. Good keeper, mild, flat bulbs. Minimum mail order 2 lbs. for .55

Parsley

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Moss Curled. Rich deep green color. Grows to 8 inches. (70 to 80 days)	.15	.25	.50	1.35

Parsnips

One half ounce of seed will plant 200 feet of row. Plant between April 25 and June 1 in rows about 1½ feet apart. Thin plants to 2 to 4 inches in the row. The average yield from 100 feet of row is 2 to 3 bushels.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Hollow Crown. Roots 14 inches in length, white, smooth, thick at shoulder. (95 days)	.10	.20	.55	1.65

Peas

One pound of seed will plant 100 feet of row. Average yield should be about 50 to 60 pounds of peas in the pod. Plant in shallow trench, 1 inch to 2 inches deep, and scatter peas just so they do not touch. Rows should be 2 feet to 3 feet apart or in pairs 8 inches apart with 2 feet to 3 feet between each pair. Most years plant between April 25 and May 20. Prepare the seed bed well and fertilize. Limestone is also beneficial in most soils. Plant peas in different section of garden each year. This seed has been treated with Spergon to control soil-borne diseases.

Except as otherwise noted, prices are per pound.

VARIETY, DESCRIPTION AND PRICE	1 lb.	5-9 lbs.	10-24 lbs.	25-99 lbs.	100 lbs.
World's Record. Early, vines 26 in., pods 4 in. Very prolific. (61 days)	.53	.51	.48	.36	.34
Laxton's Progress. Early, large, podded, attractive. Short vines. (62 days)	.53	.51	.48	.35	.34

Little Marvel. Vines 18 in., pods 3 in., early, sweet. (64 days)	.53	.51	.48	.36	.34
Merrimack Improved Telephone. Dark green pods, vines 42 inches, pods 5 ½ inches, rich flavored. (70 days)	.53	.51	.48	.36	.34
Dwarf Telephone. Light green, stocky, excellent quality, 24 inches, pods 4 ½ inches. (75 days)	.53	.51	.48	.36	.34
Freezonian. An improved Thomas Laxton. Vines 26 inches, pods large, medium early. Best quality for freezing, canning, or eating fresh. (63 days)	.53	.51	.48	.36	.34

Peppers

Peppers like hot weather. It is usually necessary to start the plants under glass and transplant them in the garden. Set them in rows 30 to 36 inches apart with 15 to 18 inches between the plants. Do not fertilize heavily.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Merrimack Wonder. Sweet, large, thick-walled California Wonder Type. Will mature under N. H. conditions.	.10	.75	1.25	4.00

Pumpkin

One ounce of seed will plant about 100 feet of row. Plant between May 20 and June 10 in rows about 5 feet apart with 5 to 8 feet between the hills. The average yield on 100 feet of row is about 150 pounds.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Connecticut Field. Good for stock feed. (110 days)	.15	.25	.75	2.25
Sugar. Standard variety for the home garden. Flesh orange-yellow, sweet. (118 days)	.15	.25	.75	2.25
Jack-O-Lantern. Medium size bright orange. Just right for Halloween use. (112 days)	.15	.25	.75	2.25

Radishes

One half ounce of seed will plant about 100 feet of row. Plant from April 25 to August 15 in rows 12 to 15 inches apart. Thin to 1 to 3 inches between plants.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Cherry Belle. Very high quality table radish. (24 days)	.10	.15	.50	1.50
Scarlet Globe. The most desirable table sort, crisp, tender. (24 days)	.10	.15	.50	1.50
White Icicle. Roots 5 to 5½ inches long, slender. Flesh white and brittle. (27 days)	.10	.15	.50	1.50

Spinach

One half ounce of seed will plant 100 feet of row. Plant between April 25 and July 15 in rows which are 12 to 18 inches apart. Thin to 1 to 3 inches between plants. Spinach does not grow well in acid soil.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
America. Compact vigorous grower resistant to warm weather. Excellent quality for home or market garden use. (50 days)	.10	.15	.40	1.00
Bloomsdale Savoy Long Standing. Plants large, uniform, and erect with crumpled dark green leaves. (42 days)	.10	.15	.30	.75
King of Denmark. Large, spreading plants with crumpled leaves, well adapted for canning. (46 days)	.10	.15	.30	.75
New Zealand. Not a true spinach, thrives in hot, dry weather, deep green leaves, may be picked repeatedly. (70 days)	.10	.15	.50	1.30

Squash

One ounce of seed will plant 100 feet of row. Plant between May 20 and June 10 in rows 5 feet apart with 5 to 8 feet between the hills in the row. The average yield of 100 feet of row is about 150 pounds.

VARIETY, DESCRIPTION AND PRICE	Pkt.	1 oz.	¼ lb.	1 lb.
Blue Hubbard, Colby Strain. Grown in Litchfield, N. H., especially selected for quality and trueness to type, thick, yellow-orange flesh. (110 days)	.15	.35	1.20	4.00
Baby Blue Hubbard. A new squash developed by the University of N. H. Semi-bush type. Fruits 4 to 6 lbs., very high quality. (100 days)	.15	.85	3.00	9.00
Colby's Butternut. Grown by Colby Bros., in Litchfield, N. H., this strain is especially selected for trueness to type and uniform quality. (100 days)	.15	.90	3.25	10.00
VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Blue Hubbard. The old New England favorite, thick fleshed, finely flavored. (110 days)	.20	.30	.90	2.95
Buttercup. Developed by Dr. Yeager, turban shaped, orange flesh, good storage and eating quality. (110 days)	.20	.40	1.25	3.75
Bush Buttercup. Developed by Dr. A. F. Yeager at U. N. H. Excellent quality. Fruits similar to regular Buttercup.	.15	.30	.95	3.35

John Cardinal of the "Hometown Hornets" 4-H Club in Farmington is proud of his Blue Hubbard Squash.

Two Easy Ways to Buy Merrimack Seeds

The seeds, garden supplies, pest control materials, and other items described in this catalog are on sale at the 22 stores of the Merrimack Farmers' Exchange, Inc. The location of these stores is shown on page 22.

If you live in New Hampshire, we suggest that you make your selection of Merrimack seeds at one of our stores. The same seeds are available at the same prices by mail. An order form is included in this catalog.

In addition to the items described in this catalog, the Merrimack Farmers' Exchange handles a complete line of building materials, with dependable service through the 22 Merrimack stores.

The Exchange also manufactures a complete line of feeds for poultry and livestock, and distributes these feeds in New Hampshire and adjoining areas of other states.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Butternut. A new type squash not related to pumpkin or the true squashes. It is excellent for pies and baking in the fall. (100 days)	.15	.30	1.25	4.35
Golden Delicious. Fruits bright reddish orange. Flesh deep orange, excellent flavor. (105 days)	.20	.30	.90	2.95
Green Delicious. Good keeper, small fruit. (102 days)	.20	.30	.90	2.95
Early Prolific Straightneck. Extra early, bright lemon-yellow straightneck. (50 days)	.15	.25	.80	2.50
Early Yellow Summer Crookneck. Very prolific, fruits curved at neck, light yellow. (52 days)	.15	.25	.80	2.50
Green Hubbard. Winter, good keeper, flesh orange-yellow, dry. (105 days)	.20	.30	.90	2.95
Table Queen. Des Moines or Acorn, oval, pointed at end, flesh light yellow, bakes well. (85 days)	.15	.25	.80	2.60
Warren Turban. Essex stock, brilliant golden yellow, hard shell, winter. (110 days)	.20	.30	.90	2.95

Sunflowers

VARIETY, DESCRIPTION AND PRICE	1 oz.
Extra large gray sunflower seeds.	.15

Swiss Chard

One half ounce of seed will plant 100 feet of row. Plant between May 1 and June 1 in rows 18 inches apart with 6 inches between plants. The average yield on 100 feet of row is about 200 pounds.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
Lucullus. The most popular wrinkled sort. (50 days)	.15	.25	.65	1.80

Tomatoes

Tomatoes must be started under glass and transplanted in the garden, after danger of frost is past. Set plants in rows 2 to 4 feet apart and 2 to 3 feet between plants. Fertilize well. Average yield for 100 feet of row is 200 to 300 pounds.

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Bonny Best. Good shipper, very hard, fruits medium size, smooth, bright. (73 days)	.10	.40	.80	2.25
Home Garden (Early Chatham). No transplanting necessary. Delight in growing fruit direct from seed planted in your garden. Fruit smooth, light red, flesh firm, and high quality. (62 days)	.10	.40	.80	2.25

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.	¼ lb.
Marglobe. Medium, large, deep red fruit, thick flesh. (78 days)	.10	.40	.80	2.25
New Hampshire Victor. Early, heavy yielding tomato, bright scarlet fruit. Especially recommended for N. H. conditions. (68 days)	.10	1.25	1.95	7.00
Queens. Very good quality fruit, good shape, minimum cracking. For home garden or early market. (75 days)	.10	.40	.80	2.25

Turnip

One half ounce of seed will plant 250 feet of row. Plant April 25 to August 15 in rows 15 to 18 inches apart. Thin to 3 to 5 inches between plants. The average yield from 100 feet of row is about 3 to 4 bushels.

VARIETY, DESCRIPTION AND PRICE	½ oz.	1 oz.	¼ lb.	1 lb.
American Improved Yellow Rutabaga. Best keeping winter sort. (88 days)	.10	.15	.50	1.30
Purple Top White Globe. Large, globe-shaped, white, very sweet. (60 days)	.10	.15	.50	1.30

Watermelon

One half ounce of seed plants about 200 feet of row. Plant seed May 25 to June 15 in rows 5 feet apart with 5 to 8 feet between the hills.

VARIETY, DESCRIPTION AND PRICE	Pkt.	1 oz.	¼ lb.	1 lb.
Merrimack Sweetheart. Medium size, prolific, excellent quality. (90 days)	.10	.40	1.15	3.50

VARIETY, DESCRIPTION AND PRICE	Pkt.	1 oz.	¼ lb.	1 lb.
Improved White Mountain. Small, nearly round, good quality. (85 days)	.10			
New Hampshire Midget. The latest introduction by Dr. Yeager at the University of N. H. Excellent quality. (82 days)	.10	.40	1.15	3.50
Early Bird. One of the "icebox" type melons which has really good quality. Fruits weigh 5 to 8 pounds. (80 days)	.10	.40	1.15	3.50

Ornamental Specialties

VARIETY, DESCRIPTION AND PRICE	Pkt.
Indian Corn. Our strain of ornamental corn has been especially developed to produce the most beautiful muliti-colored ears for decorative purposes.	.15

Scarlet Runner Beans

VARIETY, DESCRIPTION AND PRICE	Pkt.	½ oz.	1 oz.
Scarlet Runner Ornamental.	.15	.35	1.25

Nasturtiums

VARIETY, DESCRIPTION AND PRICE	Pkt.	1 oz.	¼ lb.	1 lb.
Dwarf Mixed. A good assortment of well-selected colors.	.15	.25	.85	2.85
Tall Mixed. Climbing ornamental type.	.15	.25	.85	2.85

Director of Public Relations
GUS McLAUGHLIN

Merrimack's Monthly Messenger, the magazine of the Merrimack Farmers' Exchange, Inc., is published the first of each month at Concord, N. H.

Merrimack Farmers' Exchange is a farmer-owned and stock-financed co-operative which operates a mill and 22 retail stores serving central and southern New Hampshire, and a brokerage office on the Boston Grain and Flour Exchange. The Exchange manufactures Merrimack Feeds which it distributes with many other farm and home needs to about 15,000 customers. For these customers it controls the quality and price of poultry and live-stock feeds in its territory.

The Exchange neither requests nor receives any tax exemption or reduction beyond those applicable to all business.

The Main Office of the Merrimack Farmers' Exchange, Inc., is at 18-22 Low Avenue, Concord, N. H., telephone CAPitol 5-6662. Use the same number to call Merrimack's Milling Department and the Warehouse at Bow. For *equipment* service call your nearest Merrimack store.

The Wholesale Grain Division of the Exchange is at 177 Milk Street, Boston, Massachusetts, telephone HUBbard 2-7150.

General Manager of the Exchange is Loren A. O'Brien, and sales manager is Charles W. Fletcher. Loren A. O'Brien, Jr., is the manager of the Wholesale Grain Division in Boston. Carlo T. Bruno is manager of the Milling Department, and Harold Chase is credit manager.

Fruit Trees	Kolo Fruit		Kolo Fruit	Do not apply within 10 days
	Tree Dust		Tree Dust	of harvest
	or Spray	5	or Spray	

Legumes, Grasses and Seed Grains

Whatever your soil conditions, dry or wet, sandy or clay, or for whatever purpose you have planted your field, pasture, hay, silage or as a pasture supplement crop, Merrimack stores will have the field seeds that are adapted to New Hampshire growing conditions. For prices call or write your Merrimack store.

ALFALFA produces a very high quality feed and will yield a heavy crop if the soil is well limed and fertilized. There are several varieties suitable for New Hampshire. Ranger and Vernal are wilt-resistant and suitable for use in long rotation. Grimm and Narragansett are high yielding and better suited for the short rotation.

ALSIKE clover is a hardy perennial clover which thrives on heavy silt or clay soil with plenty of moisture. Generally sown in mixture containing grasses, Alsike will increase the digestible protein content and so help to produce a high-quality roughage.

BIRDSFOOT TREFOIL is a long-lived herbaceous perennial which is deep rooted and drought resistant. It will grow in acid soil, but responds well to lime and fertilizer. Birdsfoot Trefoil Nod-O-Gen should be used on the seeds before planting to give the best growth. This plant does very well on clay soil.

CANADA FIELD PEAS is an annual plant used largely with oats for production of fodder and hay. The crop should not be harvested until the pods are well formed.

LADINO CLOVER is a perennial that grows rapidly and spreads by creeping fleshy stems that send up new growth from the nodes. Ladino will stand cold winters if not grazed too close in the fall. Ladino is usually seeded at the rate of one to two pounds per acre with a grass to make an excellent high protein feed.

MEDIUM RED CLOVER is an excellent variety of clover for pastures and hayland. Medium Red Clover has a well-balanced deep-feeding root system and gives best yields on rich well-drained soils that are well limed.

WHITE DUTCH CLOVER is a perennial that spreads by creeping stems. It will stand trampling very well and is used in lawn and pasture mixtures. White Dutch thrives on soils that are not acid and are fertile.

VETCH is excellent to seed with small grains for silage, pasture, hay or a green manure crop. Vetch is a viny plant that grows well under cool conditions and is more tolerant of acid soils than most legumes and will grow on most any soil.

SOYBEANS is an annual that grows erect similar to beans. Soybeans make excellent feed grown alone or in combinations with grains. It will do well in either a dry or wet year after they are established. The seed should be inoculated with Soybean Nod-O-Gen for best results.

TIMOTHY is a short-lived perennial adapted to cool climatic conditions where the soil is fertile, moist and high in nitrogen. Standard grass in hayland mixture for many years, it is highly palatable and has a slightly laxative effect.

BROME GRASS is a hardy perennial grass with excellent feeding qualities. Best adapted to fertile, moist soil of the clay loam type. Brome Grass makes excellent hay when combined with alfalfa. Lincoln is a leading variety of Brome Grass.

REEDS CANARY GRASS is a perennial that produces well on moist land or land that is flooded in the spring. Reeds Canary is one of the first grasses to start in the spring. Makes a very leafy tall growth.

ORCHARD GRASS will persist on soil that is medium to low in fertility. Orchard grass is deep rooted, somewhat drought resistant, grows early in spring and late in the fall. Produces a fair quality hay when seeded with legumes.

RED TOP is a perennial that will grow under most soil conditions, wet land, sour land, and is drought resistant. Red Top is a soil builder and a common ingredient in hay mixture.

SUDAN GRASS is an annual which grows rapidly on fertile soil and can be cut for hay sixty days after planting. Sudan grows well in the heat of mid-summer and makes an excellent emergency pasture grass crop.

JAPANESE MILLET is a quick growing annual plant. Highly recommended for silage and green forage crop yielding two or three tons per acre on fertile soil. Seed at the rate of 25 to 40 pounds per acre from late May to early July.

HUNGARIAN MILLET is an early variety producing excellent quality hay and good yields although it has a high moisture requirement. Seed at rate of 50 pounds per acre.

RYE GRASS—domestic is an annual or short-lived perennial that will do well in soil not too fertile. Perennial rye grass is excellent in mixtures for pastures and road banks.

BUCKWHEAT is an annual used primarily for conditioning poor land, smothering weeds, and for bee pastures. Japanese buckwheat is the most satisfactory variety and is usually seeded at the rate of 35 to 50 pounds per acre.

RAPE is a biennial that is a member of the turnip family. It will grow until freezing and produce a lot of succulent green feed.

OATS. Rust resistant Garry Oats is an outstanding achievement in plant breeding. During the last three years of testing, Garrys have outyielded our best varieties, even when rust was not a factor. Its tremendous potential is fully apparent when rust does occur as it has in the past and will again in the future. Then Garrys continue to produce its full abundant yield. Garry Oats are resistant to all races of stem rust including Race 7-A; to all races of crown rust that are of consequence; to root rot. This new variety of oats has excellent straw strength, is six inches taller than Clinton, yields excellent, and produces large yields of creamy

white grains with a high test weight per bushel. The Garry Oat plant has remarkable vigor, combined with tremendous stooling ability. The leaves are very wide and prolific.

BARLEY. Moore is an excellent spring variety for hay or grain.

WHEAT. Henry is a high producing spring wheat that will give you a good stand of hay or a high yield of grain.

WINTER RYE. Balbo rye produces a strong vigorous straw excellent for a winter cover crop and for spring grazing. Spring rye is an annual for hay or grain.

KENTUCKY BLUE GRASS is a perennial with creeping roots. It is one of the palatable grasses. Kentucky blue grass can stand heavy grazing and trampling by stock. It is a very valuable grass for lawn mixtures.

MERRIMACK LAWN SEED

A beautiful lawn adds immeasurably to the value and appearance of your home. It denotes pride of ownership. **Merrimack Lawn Seed** is designed to give you the beautiful lawn you have dreamed about.

Merrimack Lawn Seed contains annual grasses to give you that quick growth needed to prevent erosion, together with a careful selection of the permanent grasses which will comprise your established lawn. It is a blend of the highest quality seeds.

The many experiences which the Merrimack Farmers' Exchange has had in the seed business is your guarantee of highest quality.

Merrimack Lawn Seed is packed in attractive 1 lb., 5 lb., and 100 lb. bags and is available at 22 Merrimack stores.

Merrimack Lawn Seed is Economical

Evergreen	1 lb. \$.79
Shady	1 lb. .89

- It's just what you need to get 1958 off to a "smooth sailing" start.
- It's perfect for Farm Equipment . . . for Home Modernization buying.
- Family Security means just this. Purchaser is given an Insurance Policy at no extra cost to him. In the event of death the unpaid balance is cancelled. The Exchange is the only farm organization in New Hampshire to offer the Family Security Feature.

A-1 Cultivator	11.10
A-52 Rotary Motor (Shown above)	41.00

Ruggedness and streamlined styling are combined with greater ease of operation in the new Planet Jr. B8G tractor. The streamlined hood in the unit fastens in the front and folds back like the hood on an automobile for easy maintenance. The extra long gear shift lever, easily accessible to the operator, controls the three forward and one reverse speeds of the unit. The unit also features a rear and newly-designed quick front hitch and two power take-offs of different speeds for driving tractor attachments.

Merrimack Selected Corn Seed

The above picture of Wisconsin 335 Corn harvested by William Jordan, Jr. (right). This corn will contribute to the lowering of feed costs this winter.

Relative Maturity Rating for Grain	Principal Use	Merrimack Hybrids	Comparable Open Pollinated Varieties
90-100 days	Grain	Wisconsin 240 — \$9.25 per bu. A hybrid for the short growing season of New Hampshire.	
90-100 days	Silage	Wisconsin 335 — \$8.95 per bu. This is an excellent hybrid for silage in areas with a short growing season. It is an excellent variety for grain in the medium season classification.	
100-115 days	Grain	Massachusetts 63 — \$10.95 per bu. A very high yielding hybrid for both grain and silage in New Hampshire.	
100-115 days	Silage	Cornell M4 — \$9.20 per bu. Excellent for silage in areas with a medium growing season and may be used for grain in the areas with a longer growing season. PA 444 — \$9.20 per bu. An excellent hybrid for silage or grain. Has good stalk vigor and yields well.	Leaming \$6.25 per bu.
115 days and over	Grain	Cornell 29-3 — \$8.60 per bu. A very popular hybrid for silage in areas with a medium length growing season and for grain in areas with a longer growing season.	
115 days and over	Silage	Ohio K24 — \$8.95 per bu. A good variety for silage in areas with long growing season. Not recommended for grain in New Hampshire. Ohio M-15 — \$8.95 per bu. A recent introduction by Ohio State University. Has strong root system and stalks. Good for silage in areas with a long growing season. Not recommended for grain in New Hampshire.	

Merrimack Lawn Seed . . . YOUR BEST BET

Many years of successful experience stand behind the three blends of **Merrimack Lawn Seed**.

Merrimack Turf Green formulation is designed for the home owner whose home is his pride and whose lawn will enhance its beauty.

Merrimack Evergreen is designed for the home owner who wants a beautiful lawn that will stand the rigors of outdoor living and family fun.

Merrimack Shady formulation is for those shady spots in which there is not sufficient sun for the other seed to grow well.

Merrimack Lawn Seeds are not tailored to a low price. They are designed to give you full value; packaged in 1, 5 and 100 lb. packages.

We suggest planting before May 15 to lessen competition with weeds and to prevent drought injury to the young seedlings.
